Contents

1 Introduction 1
- 1.1 The Lure of Analytic Geometry 1
- 1.2 Symbiosis of Algebra and Geometry 3
- 1.3 Computer–aided Geometric Design 4
- 1.4 Pythagorean–hodograph Curves 6
- 1.5 Algorithms and Applications 7

Part I Algebra

2 Preamble 11
- 2.1 A Historical Enigma 11
- 2.2 Theorem of Pythagoras 17
- 2.3 Al–Jabr wa'l–Muqabala 22
- 2.4 Fields, Rings, and Groups 25

3 Polynomials 29
- 3.1 Basic Properties 29
- 3.2 Polynomial Bases 31
- 3.3 Roots of Polynomials 36
- 3.4 Resultants and Discriminants 38
- 3.5 Rational Functions 41

4 Complex Numbers 45
- 4.1 Caspar Wessel 45
- 4.2 Elementary Properties 48
- 4.3 Functions of Complex Variables 49
- 4.4 Differentiation and Integration 51
- 4.5 Geometry of Conformal Maps 54
- 4.6 Harmonic Functions 56

4.7 Conformal Transplants 56
4.8 Some Simple Mappings 58

5 Quaternions 61
5.1 Multi–dimensional Numbers 61
5.2 No Three–dimensional Numbers 64
5.3 Sums and Products of Quaternions 64
5.4 Quaternions and Spatial Rotations 67
5.5 Rotations as Products of Reflections 69
5.6 Families of Spatial Rotations 70
5.7 Four–dimensional Rotations 74

6 Clifford Algebra 79
6.1 Clifford Algebra Bases 79
6.2 Algebra of Multivectors 80
6.3 The Geometric Product 82
6.4 Reflections and Rotations 85

Part II Geometry

7 Coordinate Systems 89
7.1 Cartesian Coordinates 91
7.2 Barycentric Coordinates 93
7.2.1 Barycentric Coordinates on Intervals 94
7.2.2 Barycentric Coordinates on Triangles 95
7.2.3 Transformation of the Domain 98
7.2.4 Barycentric Points and Vectors 98
7.2.5 Directional Derivatives 100
7.2.6 Polynomial Bases Over Triangles 101
7.2.7 Un–normalized Barycentric Coordinates 102
7.2.8 Three or More Dimensions 103
7.3 Curvilinear Coordinates 104
7.3.1 One–to–one Correspondence 105
7.3.2 Distance and Angle Measurements 106
7.3.3 Jacobian of the Transformation 109
7.3.4 Example: Plane Polar Coordinates 110
7.3.5 Three or More Dimensions 111
7.4 Homogeneous Coordinates 112
7.4.1 The Projective Plane 113
7.4.2 Circular Points and Isotropic Lines 114
7.4.3 The Principle of Duality 116
7.4.4 Projective Transformations 118
7.4.5 Invariance of the Cross Ratio 122
7.4.6 Geometrical Figures and their Shadows 123
7.4.7 Projective Geometry of Three Dimensions 127

8 Differential Geometry 131
8.1 Intrinsic Geometry of Plane Curves 133
8.1.1 Tangent and Curvature 133
8.1.2 The Circle of Curvature 135
8.1.3 Vertices of Plane Curves 137
8.1.4 The Intrinsic Equation 137
8.2 Families of Plane Curves 138
8.2.1 Envelopes of Curve Families 139
8.2.2 Families of Implicit Curves 140
8.2.3 Families of Parametric Curves 142
8.2.4 Families of Lines and Circles 144
8.3 Evolutes, Involutes, Parallel Curves 144
8.3.1 Tangent Line and Osculating Circle 144
8.3.2 Evolutes and Involutes 146
8.3.3 The *Horologium Oscillatorium* 154
8.3.4 Families of Parallel (Offset) Curves 161
8.3.5 Trimming the Untrimmed Offset 167
8.4 Intrinsic Geometry of Space Curves 178
8.4.1 Curvature and Torsion 178
8.4.2 The Frenet Frame 180
8.4.3 Inflections of Space Curves 181
8.4.4 Intrinsic Equations 181
8.5 Intrinsic Geometry of Surfaces 183
8.5.1 First Fundamental Form 183
8.5.2 Second Fundamental Form 184
8.5.3 Curves Lying on a Surface 185
8.5.4 Normal Curvature of a Surface 186
8.5.5 Principal Curvatures and Directions 186
8.5.6 Local Surface Shape 188
8.5.7 Gauss Map of a Surface 190
8.5.8 Lines of Curvature 191
8.5.9 Geodesics on a Surface 193

9 Algebraic Geometry 197
9.1 Parametric and Implicit Forms 198
9.2 Plane Algebraic Curves 199
9.2.1 Singular Points 201
9.2.2 Intersections with a Straight Line 202
9.2.3 Double Points of Algebraic Curves 202
9.2.4 Higher–order Singular Points 204
9.2.5 Genus of an Algebraic Curve 204
9.2.6 Resolution of Singularities 208
9.2.7 Birational Transformations 211
9.2.8 Plücker Relations 212

9.2.9 Bézout's Theorem 214
9.2.10 Implicitization and Parameterization 216
9.3 Algebraic Surfaces 219
9.3.1 Singular Points and Curves 220
9.3.2 Rationality of Algebraic Surfaces 221
9.4 Algebraic Space Curves 222
9.4.1 Composite Surface Intersections 223
9.4.2 Plane Projections of a Space Curve 226
9.4.3 Genus of an Algebraic Space Curve 227
9.4.4 Singularities of Space Curves 228

10 Non–Euclidean Geometry 231
10.1 The Metric Tensor 232
10.2 Contravariant and Covariant Vectors 233
10.3 Methods of Tensor Algebra 235
10.4 The Geodesic Equations 240
10.5 Differentiation of Tensors 241
10.6 Parallel Transport of Vectors 243

Part III Computer Aided Geometric Design

11 The Bernstein Basis 249
11.1 Theorem of Weierstrass 250
11.2 Bernstein–form Properties 252
11.3 The Control Polygon 254
11.4 Transformation of Domain 254
11.5 Degree Operations 255
11.6 de Casteljau Algorithm 256
11.7 Arithmetic Operations 258
11.8 Computing Roots on $(0, 1)$ 259
11.9 Numerical Condition 260

12 Numerical Stability 261
12.1 License to Compute 261
12.2 Characterization of Errors 262
12.3 Floating–point Computations 263
12.3.1 Floating–point Numbers 264
12.3.2 Floating–point Arithmetic 266
12.3.3 Dangers of Digit Cancellation 267
12.3.4 Models for Error Propagation 270
12.4 Stability and Condition Numbers 271
12.4.1 Condition of a Polynomial Value 272
12.4.2 Condition of a Polynomial Root 275
12.4.3 Wilkinson's Polynomial 277

12.4.4 Vector and Matrix Norms 281
12.4.5 Condition of a Linear Map 285
12.4.6 Basis Transformations 287
12.4.7 Subdivision Processes 289
12.4.8 Ill–posed Problems 289
12.5 Backward Error Analysis 290
12.5.1 Equivalent Input Errors 290
12.5.2 Example: Horner's Method 291

13 Bézier Curves and Surfaces 295
13.1 Convex–hull Confinement 296
13.2 Variation–diminishing Property 298
13.3 Degree Elevation 298
13.4 de Casteljau Algorithm 300
13.5 Bézier Curve Hodographs 301
13.6 Rational Bézier Curves 303
13.7 Conics as Bézier Curves 309
13.8 Tensor–product Surface Patches 312
13.9 Triangular Surface Patches 320

14 C^2 Cubic Spline Curves 323
14.1 Mechanical Splines 324
14.2 Elastic Bending Energy 325
14.3 Polynomial Interpolation 326
14.3.1 The Lagrange Basis 326
14.3.2 Convergence Behavior 327
14.4 C^2 Cubic Spline Functions 328
14.4.1 Cubic Hermite Form 328
14.4.2 C^2 Continuity Equations 329
14.4.3 Choice of End Conditions 330
14.4.4 Solution of Tridiagonal Systems 332
14.4.5 Minimum Energy Property 333
14.4.6 Spline Approximation Convergence 336
14.5 C^2 Cubic Spline Curves 336
14.5.1 Choice of Knot Sequence 337
14.5.2 Parametric or Geometric Continuity 338
14.5.3 Geometric Hermite Interpolation 339
14.5.4 Elastica or "Non–linear" Splines 341

15 Spline Basis Functions 345
15.1 Bases for Spline Functions 345
15.2 The Cardinal Basis 346
15.2.1 Construction of Cardinal Basis 346
15.2.2 Bivariate Spline Functions 348
15.2.3 Tensor–product Spline Surfaces 351

15.3 The B–spline Basis 353
15.3.1 The Knot Vector 356
15.3.2 Cox–de Boor Algorithm 361
15.3.3 Tensor–product B–spline Surfaces 361
15.3.4 Rational B–spline Curves and Surfaces 362
15.3.5 Bézier and B–spline Forms Compared 362
15.4 Spline Basis Conversion 364
15.4.1 Cardinal to B–spline Form 364
15.4.2 Basis Conversion Matrix 365

Part IV Planar Pythagorean–hodograph Curves

16 Arc–length Parameterization 369
16.1 In Search of an Elusive Ideal 370
16.2 The Rectification of Curves 374
16.3 Polynomial Parametric Speed 377
16.4 Algebraically–rectifiable Curves 378
16.5 Unit Speed Approximations 379

17 Pythagorean–hodograph Curves 381
17.1 Planar Pythagorean Hodographs 381
17.2 Bézier Control Points of PH Curves 384
17.3 Parametric Speed and Arc Length 386
17.4 Differential and Integral Properties 388
17.5 Rational Offsets of PH Curves 389

18 Tschirnhausen's Cubic 393
18.1 Ehrenfried Walther von Tschirnhaus 393
18.2 Tschirnhaus and Caustic Curves 396
18.3 Unique Pythagorean–hodograph Cubic 400
18.4 You Mean we Pay you to do *That*!? 404

19 Complex Representation 407
19.1 Complex Curves and Hodographs 408
19.2 One–to–one Correspondence 409
19.3 Rotation Invariance of Hodographs 414
19.4 Pythagorean–hodograph Cubics Revisited 414
19.5 Characterization of the PH Quintics 415
19.6 Geometry of the Control Polygon 419
19.7 Intrinsic Features of Corresponding Curves 422

20 Rational Pythagorean–hodograph Curves 427
20.1 Construction of Rational PH Curves 428
20.2 Dual Bézier Curve Representation 433
20.3 Relation to Polynomial PH Curves 437
20.4 Rational Arc Length Functions 438
20.5 Geometrical Optics Interpretation 439
20.6 Laguerre Geometry Formulation 444
20.7 Improper Rational Parameterizations 446
20.8 Rational Surfaces with Rational Offsets 449
20.9 Minkowski Isoperimetric–hodograph Curves 451

Part V Spatial Pythagorean–hodograph Curves

21 Pythagorean Hodographs in $\mathbb{R}^3$ 455
21.1 Geometry of Spatial PH Cubics 456
21.2 Spatial Pythagorean Hodographs 462
21.3 Bézier Control Polygons 464
21.4 Differential Properties 465

22 Quaternion Representation 469
22.1 Pythagorean Condition in $\mathbb{R}^3$ 469
22.2 Degeneration of Spatial PH Curves 472
22.3 Rotation Invariance of Hodographs 476
22.4 Reflection Form of Hodographs 480
22.5 One–to–one Correspondence? 483

23 Helical Polynomial Curves 485
23.1 Helical Curves and PH Curves 486
23.2 Morphology of Helical PH Quintics 488
23.3 Monotone–helical PH Quintics 490
23.4 General Helical PH Quintics 492
23.5 Sufficient and Necessary Conditions 497

24 Minkowski Pythagorean Hodographs 507
24.1 The Minkowski Metric 508
24.2 Medial Axis Transform 510
24.3 Minkowski PH Curves in $\mathbb{R}^{2,1}$ 512
24.4 Clifford Algebra Representation 515
24.5 MAT Approximation by MPH Curves 516
24.6 Generalization to the Space $\mathbb{R}^{3,1}$ 519

Part VI Algorithms

25 Planar Hermite Interpolants 523
25.1 Hermite Interpolation Problem 524
25.2 Solution in Complex Representation 527
25.3 The Absolute Rotation Index 531
25.4 Comparison with "Ordinary" Cubics 535
25.5 Higher–order Hermite Interpolants 537
25.6 Monotone Curvature Segments 539

26 Elastic Bending Energy 543
26.1 Complex Form of the Integrand 544
26.2 Energy of Tschirnhaus Segments 545
26.3 Bending Energy of PH Quintics 546
26.4 The "Gracefulness" of PH Quintics 550
26.5 Minimal–energy Hermite Interpolants 552

27 Planar C^2 PH Quintic Splines 555
27.1 Construction of PH Splines 555
27.1.1 C^2 PH Quintic Spline Equations 556
27.1.2 End Conditions for PH Splines 558
27.1.3 Number of Distinct Interpolants 560
27.2 Solution by Homotopy Method 561
27.2.1 Choice of Initial System 561
27.2.2 Predictor–corrector Procedure 562
27.2.3 Empirical Results and Examples 565
27.3 Solution by Iterative Methods 572
27.3.1 Choice of Starting Approximation 572
27.3.2 Functional Iteration and Relaxation 574
27.3.3 Newton–Raphson Method 576
27.3.4 Computed Examples 579
27.4 Generalizations of PH Splines 582
27.4.1 Non–uniform Knot Sequences 582
27.4.2 Shape–preserving PH Splines 586
27.5 Control Polygons for PH Splines 587
27.5.1 Equivalent Interpolation Problem 588
27.5.2 Inclusion of Multiple Knots 589
27.5.3 Emulating B–spline Curve Properties 590
27.5.4 Illustrative Examples 591

28 Spatial Hermite Interpolants 595
28.1 G^1 Interpolation by Cubics 595
28.2 C^1 Hermite Interpolation Problem 596
28.3 Rotation Invariance of Interpolants 598
28.4 Residual Degrees of Freedom 600

28.5 Integral Measures of Shape 600
28.6 Clifford Algebra Formulation 604
28.7 Helical PH Quintic Interpolants 605
28.8 Higher–order Hermite Interpolants 613
28.9 Spatial C^2 PH Quintic Splines 613

Part VII Applications

29 Real–time CNC Interpolators 619
29.1 Digital Motion Control 619
29.2 Taylor Series Interpolators 621
29.3 PH Curve Interpolators 623
29.3.1 Constant Feedrate 624
29.3.2 Curvature–dependent Feedrate 625
29.3.3 Offset Curve Interpolator 626
29.4 Feedrate in Terms of Arc Length 627
29.4.1 Linear Dependence on Arc Length 628
29.4.2 Quadratic Dependence on Arc Length 628
29.5 Time–dependent Feedrate 630
29.5.1 Polynomial Time Dependence 631
29.5.2 Acceleration/Deceleration Profiles 632
29.5.3 Traversing a Single PH Curve 634
29.5.4 Experimental Results 635
29.6 Constant Material Removal Rate 642
29.6.1 Form of Feedrate Function 643
29.6.2 Interpolator Algorithm 644
29.6.3 Experimental Results 647
29.7 Contour Machining of Surfaces 651
29.7.1 Tool Path Generation 651
29.7.2 Optimal Contour Orientations 653

30 Rotation–minimizing Frames 661
30.1 Introduction and Motivation 661
30.2 Adapted Frames on Space Curves 664
30.3 Euler–Rodrigues Frame for PH Curves 666
30.4 Rotation–minimizing Frames 667
30.5 Energy of Framed Space Curves 668
30.6 Exact RMFs on PH Curves 670
30.6.1 Integration of Rational Functions 672
30.6.2 Frames for PH Cubics and Quintics 674
30.7 Rational RMF Approximations 677
30.7.1 Rational Hermite Interpolation 679
30.7.2 Computed Examples 685
30.8 Parameterization of Canal Surfaces 689

31 Closure 693
